## **Contents**

1. What Is AI Music (And Why It's Not a Scam)
  2. How to Start Without Experience
  3. Inspiration and Common Beginner Mistakes
  4. How to Create Music Step-by-Step
  5. Tips for Better Results & How to Write Prompts
  6. What's Next – Sharing, Publishing, and Using Your Music
  7. Conclusion – Now It's Up to You
- 

## **1. What Is AI Music (And Why It's Not a Scam)**

A few years ago, most people believed music could only be created by humans. The idea that artificial intelligence could compose a song or beat sounded like science fiction. But now we know AI can not only assist musicians –

it can create music from scratch. Even if you've never composed music before, **you can start now.**

### **So, what is AI music?**

AI music is music created with the help of artificial intelligence. It learns from hundreds of thousands of songs, analyzing rhythms, chords, melodies, and lyrics. Based on that knowledge, it generates new music that *sounds* like it was made by a human.

There are two main approaches:

- **Generative AI (end-to-end)** – creates a full track from a simple text prompt (e.g., “melancholic piano motif in cinematic style”). Tools: *Suno, Udio, Soundraw.*
- **AI Assistant** – helps you inside a DAW by suggesting chords, harmonizing melodies, etc.

### **Is it real creativity or just copying?**

This is a common question. The truth is:

- AI doesn't copy songs. It generates new combinations based on what it has “understood” from others.
- It's like listening to hundreds of songs and composing your own – except AI does it in seconds.

Important: The final result **depends on you and your input.** AI is a tool. **You're the director.**

### **Why should I care?**

- You don't need to read music.
- You can start creating within minutes.
- You can make original music for videos, podcasts, TikTok – or just for fun.
- And if you dream bigger – you can publish or even sell it.

### **Practical experience:**

“I’ve been composing for a while and understand music theory. But when I started using AI as a helper, my creative possibilities expanded dramatically. AI helps me find new harmonies, rhythms, melodies – sometimes even ideas I’d never think of. The music flows faster, sounds more unique, and opens new creative doors.”

---

## **2. How to Start Without Experience**

Maybe you’ve never studied music. Maybe you’ve never held a guitar or sat at a piano. Still – **you can create your first track in minutes**, and it might sound surprisingly good.

AI tools are designed to be user-friendly and accessible to everyone.

### **What you need:**

- A phone or computer
- Internet connection

- Willingness to create

You don't need cables, microphones, sheet music, or expensive software. Free tools are enough to begin.

### **Where to start – accessible tools:**

1. **Suno AI** – describe the music, get a full song with vocals
2. **Soundraw.io** – choose genre, mood, duration; export options
3. *(Upcoming Project)* – in development: our own tool combining free creativity with AI assistance

### **How it works in practice:**

1. Open a tool
2. Enter a prompt: “dark ballad about lost love”
3. AI creates a track
4. You tweak and export it

---

## **3. Inspiration and Common Beginner Mistakes**

### **Where to find inspiration:**

- Music you love
- Movies, games, stories
- Your mood or daily feelings

- Other creators

**Most common mistakes:**

- Expecting too much too soon
- Vague prompts
- Not editing results
- Comparing yourself to professionals

**Golden rule:**

*Create often, edit later.*

---

**4. How to Create Music – Step by Step**

1. Choose a style or mood (pop, ambient, cinematic...)
  2. Set the tempo (e.g., 120 BPM for house)
  3. Write a clear prompt
  4. Let the AI generate a draft
  5. Edit and export
  6. Upload to SoundCloud, YouTube, or use it in a project
- 

**5. Tips for Better Results & Writing Prompts**

### **What is a prompt?**

A short description of what you want – style, mood, instruments, or purpose.

#### **Rules:**

- Be specific
- Describe mood and instruments
- Mention a style or reference (e.g., “in the style of Billie Eilish”)

#### **Tips:**

- Generate multiple times
- Tweak one element at a time
- Combine tracks
- Save good prompts

---

## **6. What's Next – Sharing, Publishing, and Using Your Music**

### **Where you can use your music:**

- Videos & social media (TikTok, YouTube...)
- Podcasts and livestreams
- Games and mobile apps

### **Where to publish:**

- SoundCloud, YouTube, BandLab, Gumroad, Patreon

### **How to monetize:**

- Sell beat packs and loops
  - Add donation buttons (BuyMeACoffee, PayPal)
  - Sell music as a product
- 

## **7. Conclusion – Now It's Up to You**

Music has never been more accessible.

AI is not a replacement – it's a **tool**.

Create. Explore. Share.

“Everyone can create music. You just need to start.”

---

## **What We're Working On**

Alongside this book, we're also developing our own music software that combines traditional music-making with AI assistance. Our vision is to provide a tool that's accessible, creative, and empowering – for anyone who wants to make music, no matter their background or experience.

**Our mission** is to inspire – not limit.

**Follow us – updates coming soon.**
